

GIVE THE PATIENTS IN YOUR ER OR MOBILE BEDS AN EASY WAY TO CALL FOR ASSISTANCE

Curbell's easy-to-use fall management systems can easily be repurposed in areas that don't have a connection to call the nurse.

SAVE TIME WITH CLEANING AND INCREASE INFECTION CONTROL WITH DISPOSABLE SENSOR PADS

Choose from one of our monitors and mount it to the stretcher using the included strap. All have adjustable volume and a jack for a call cord.

Place one of our 14-day disposable sensor pads under the sheet. When the patient attempts to get up, it will trigger an audible alarm on the monitor.

Connect a call cord to the monitor. When the patient presses the button, instead of the signal going to the nurse call system, it will trigger an audible alarm on the monitor.

Any call cord will do, from a standard call cord to one intended for patients with limited mobility.
